PRODUCTION MANAGEMENT

THEORY AND INDUSTRIAL APPLICATIONS

Third Edition

Srisawat Supsomboon

Table of Contents

CHAPTER 1 Using Operation to Compete	**1**
Scholastic and Harry Potter	3
Case study: Scholastic and Harry Potter	3
What is production management?	4
What is operation management	4
The role of operations in the organization	6
Process and supply chain views	6
Operations strategy	10
Using competitive priorities: Infant formula example	15
Competitive priorities: Airline example	16
Trends in operations management	16
Case study	20
Research works	22
Problems	31
CHAPTER 2 Developing Process Strategy	**35**
eBay.COM	37
Case study: ebay.com	37
What is process strategy?	38
Process structure in service	39
Process structure in manufacturing	41
Layout	43
Mathematical model for layout	47
Linear programming case study	52
Research works	57
Problems	64
CHAPTER 3 Analyzing Process	**67**
McDonald's corporation	69
Case study: McDonald's corporation	70
What is process analysis	71
A systematic approach	72
Document the process	73
Data analysis tools	77

Redesigning the Process 84
Managing and implementing processes 84
Industrial case study 84
Problems 88
CHAPTER 4 Quality Management **91**
Verizon Wireless 93
Case study: Verizon wireless 93
What is quality? 94
Total quality management 94
Problem solving tools 102
Statistical control 105
Case study 113
Research works 115
Problems 118
CHAPTER 5 Capacity Management **121**
Sharp Corporation 123
Case study: Sharp corporation 123
What is capacity? 124
Planning capacity across the organization 125
Capacity timing and Sizing strategies 129
Research works 137
Problems 144
CHAPTER 6 Process Constraints Management **147**
The Radcliffe Infirmary 149
Case Study: The Radcliffe Infirmary 149
What is a constraint? 150
Identifying and managing the bottleneck 150
Case study: Car assembly plant paint shop process improvement 150
Theory of constraints 153
Identifying and managing the bottleneck 154
A Line process 159
Linear programming case study: Product mix problem 163
Linear programming case study: Line balancing problem 165
Research works 169
Problems 175
CHAPTER 7 Lean Systems **179**
Panasonic Corporation 181
Case Study: The Radcliffe Infirmary 181
What is Lean system? 182
Eight Types of waste or Muda 182
Process considerations in Lean systems 184
What is value stream mapping? 187
Automotive company logistics and VSM 191
What is kanban? 201
Research works 205
Problems 209
CHAPTER 8 Inventory Management **211**
Walmart 213
Case Study: Walmart 213
Basic inventory concepts 214
Safety or buffer stock 216
Basic inventory management 219
EOQ the best ordering policy 220
Using LINGO to solve EOQ problem 222
Using excel solver to solve EOQ problem 223
Linear programming case study 227
Problems 229
CHAPTER 9 Effective Supply Chains Design **231**
Nikon 233
Case Study: Nikon 233
What is supply chain design? 234
Measures of supply chain performance 237
What is mass customization? 239
Outsourcing process 243
Problems 248

CHAPTER 10 Locating Facilities **251**
Bavarian Motor Works (BMW) 253
Case Study: BMW 254
What is the facility location? 254
Applying the load-distance (ld) method 256
The transportation method for location 260
Research works 268
Problems 270
CHAPTER 11 Operations Planning and Scheduling **273**
Air New Zealand 275
Case study: Air New Zealand 275
What is operations planning and scheduling? 276
Stages in planning and scheduling 277
Sales and operations plan 281
Scheduling 292
Linear programming case study 294
Research works 299
Problems 308

Supplement A Introduction to Linear Programming **311**
Supplement B Formulating Linear Programming Problem **332**
Supplement C Formulating Linear Programming Problem using LINGO Software **341**
Supplement D Formulating Linear Programming Problem using Python **359**
Supplement E Linear Programming Case Studies **384**
Index **449**
References **457**
Bibliography **459**
